SN :

The owner Marcel and Dirk

2 Barns 35.000 Layers each

Information's: 70.000 layers delivered 16 weeks old, leaving the barns after 78 weeks to the slaughter house. The well water is treated from the beginning with 3 % ANK.

Results:

Egg production rate is 6 % higher then before over the complete cycle.

Egg mass is 5 to 6 gram higher per egg.

Mortality went 30 % down comparing to the rounds before.

The numbers of broken eggs and dirty eggs went down extremely, the client do not take anymore notes about the numbers since 2 Years.

Inside the barns

Fogging unit at work

For fogging he use a 5 micro nozzle
