

Application: Disinfection of municipal drinking water.

Location of the installation: Arsanjan City, Fars Province, Iran

Arsanjan City

City population: 15 000 people.

Drinking water consumption: ~ 4 320 m³/day.

Type of the Envirolyte equipment: ELA - 3 000ANW.

Envirolyte ELA-3 000ANW

Pumping station

Previously use technology: Chlorine gas

The reasons for switching to new technology: Hazards of using this method and change of Government policies in favor of cost efficient, ecology friendly and efficient technologies.

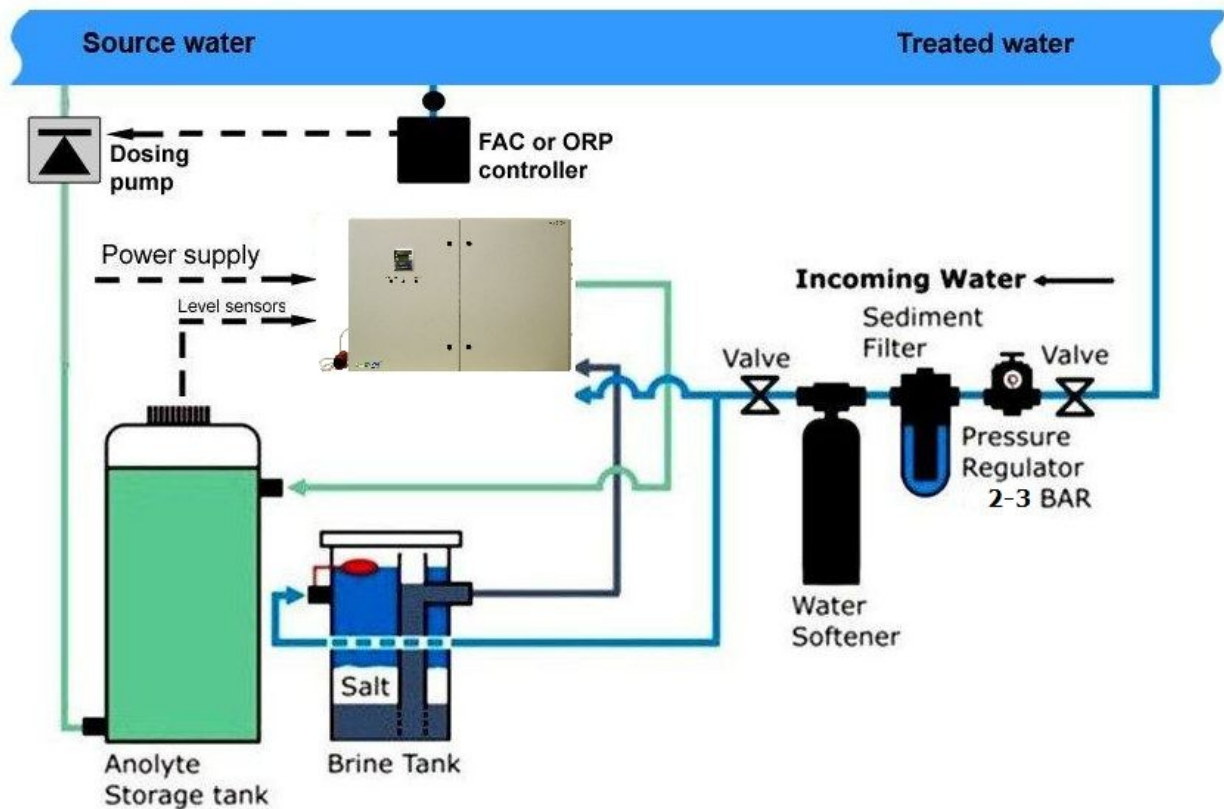

Water softeners

Rust filter prior to ELA-3 000ANW

Below can be seen a schematic of the systems layout

The reported benefits of using Environment water disinfecting technology :

Safety

- no danger of chlorine gas explosion and hazards associated with transportation of the cylinders;
- no need to mix or dilute hazardous chemicals;
- environmental friendly solution;

Efficiency

- elimination of biofilms and inactivation of pathogenic microorganisms including Legionella species, and nil bacteria counts;
- creates a longer-lasting residual than traditional chlorination, often at a lower dosage
- right dosage, no more no less – corrosion is reduced;
- significant reduction of Trihalomethane and other DBP;

Cost reducing

- Envirolyte system is fully automatic and only requires a minimal operator attention;
- no need for transport, handling or storage of chlorine gas or hypochlorite;
- on site installation in close proximity of urban population;
